

6DG Proposal

Uptime Labs, 2025

Agenda

- * **Overview & Progress**
Current contract and renewal proposal
- * **Starting Competency Score**
Current program status and roadmap for team progression
- * **Current Competency Score**
Certifications available and alignment with team goals
- * **Training Plan**
Targeted reporting to measure progress and improvement areas
- * **Target Competency Score**
Tailored session plans by role
- * **Certifications**
Skills covered and team learning path
- * **Next Steps & Q&A**

Training Plan

Training Plan

24/7, Tech Team, IMs

Incident Mechanics

- With the new ServiceNow ticket feature, there will be a deliberate focus on upskilling staff to leverage ServiceNow for improving overall Incident Mechanics and documentation (record keeping), based on recommendations from Darren and Mike Ward.
- Provide clear, timely updates – ensuring incident records are kept up to date with status, impact, and next steps so stakeholders have a single source of truth.
- Apply structured categorisation and prioritisation – using the correct categories, CI mappings, and impact/urgency settings to ensure accurate routing and reporting.
- Strengthen post-incident readiness – ensuring incident records capture root cause, resolution details, and timeline data to feed into problem management and continuous improvement

External Communication

- Consistently frame communications in business-centric terms with a clear focus on high-level customer impact.
- Demonstrate advanced stakeholder management skills, ensuring alignment and trust at all levels.
- Reduce ambiguity by clearly defining customer and business impact early, minimising executive follow-ups.
- Maintain strong communication practices such as cadence, transparency, and effective time-boxing.

Internal Communication

- Apply grounding techniques to keep communication focused, clear, and aligned during high-pressure situations.
- Deliver concise updates with explicit actions, ownership, and time-boxed outcomes when working with investigation engineers.
- Facilitate advanced collaboration by drawing out working theories from investigators and aligning the team around next steps (particularly effective when dealing with incidents with high levels of uncertainty).
