

Uptime Labs Participant Assessment Report

Participant	Scores	Key Improvements	Development Areas
Pradeep	L:3/4 C:3/4 Coord:4/4 M:3/4	• More proactive during incidents • Anticipates stakeholder questions • Handles incidents independently • Improved management/client communication • Stronger root-cause focus across team	• Lead incidents end-to-end independently • Improve executive briefings • Develop deeper communication skills
Vaishnavi	L:2/4 C:3/4 Coord:3/4 M:2/4	• Improved stakeholder engagement • Better communication in drills • Stronger debugging methodology • Better pressure management • Improved incident analysis approach	• Build confidence leading incidents • Improve technical commanding skills • Deepen RCA techniques • Strengthen troubleshooting capabilities • Bridge drill-to-production gap
Chris Watts	L:3/4 C:3/4 Coord:2-3/4 M:4/4	• Significant increase in readiness • Developed incident-response muscle memory • Improved decision-making confidence • Better structured thinking under pressure • Strong crisis composure	• Improve coordination confidence • Continue leadership development • Practice more complex scenarios

Overall Summary

Leadership: Participants demonstrated increased confidence and ownership during incidents, although additional experience leading complex real-world incidents independently remains a key growth opportunity.

Communication: Strong improvements were observed in stakeholder engagement, escalation practices, and status updates. Participants would benefit from continued development of concise and structured briefings under pressure.

Coordination: The strongest area of improvement across the cohort. Participants reported improved cross-functional collaboration, stakeholder management, and coordination during incident scenarios.

Mindset & Confidence: Participants showed increased calmness, readiness, and analytical thinking during incidents, with growing confidence in their ability to respond effectively.

Technical Skills: Several participants expressed a desire for deeper technical content, particularly around root cause analysis, troubleshooting methodologies, and predicting future issues.

Capability	Average Score
Leadership	2.7 / 4
Communication	3.0 / 4
Coordination	3.3 / 4
Mindset / Confidence	3.0 / 4

Key Takeaway

Coordination emerged as the strongest area of improvement across participants, while leadership in real-world incident command remains the most significant opportunity for continued development.

Participants consistently reported increased confidence, stronger stakeholder management capabilities, and more structured approaches to incident response. Future training should focus on advanced technical troubleshooting, root cause analysis, and complex incident-command scenarios to accelerate progression toward independent incident leadership.
