UptimeLabs

APP 10:05 AM

joined business-comms-5988. Also, Pradeep C and 28 others joined via invite.

Pradeep C

10:11 AM

Hi Team

We have a issue in place order. Customers are unable to place orders

pradeep.c

APP 10:12 AM

Incident Number INC100038: Place order is not working SEV1

Bez

APP 10:12 AM

I'm seeing some posts on social media about issues with our platform, is this a regional issue or hitting customers globally?

10:13

Customers have gone outrageous. #OBFail and #OBStealsSale are trending with frustrated posts. We're getting hammered online! Where are we @Pradeep C?

Pradeep C

10:13 AM

Issue caused in Multiple regions we are working on it

Bez

APP 10:21 AM

Got an email claiming responsibility by "BlackCrow Group" and demanding payment of \$5M in crypto. Honestly, I get these hoax emails all the time, so I'm not buying it

10:23

Wait! you're telling me this is an actual ransomware hit?

Pradeep C

10:23 AM

@Bez This is a ransomware breach our systems have been compromised

Bez

APP 10:23 AM

Alright, tell everyone, no one says a single thing outside online-boutique! I don't care who's asking, not a word until we know exactly what's going on!

10:24

Just got another ransom email, says we tried to interfere and now the price doubled. Was something stupid done on our side?

10:25

This is nightmare! @Pradeep C where are we right now?

Pradeep C

10:25 AM

Sure @Bez and SecOps team is on it.

Bez

APP 10:28 AM

Not in favor of paying. Ethically, it sets the wrong example and there's no real guarantee we'll get anything back

Tinus

APP 10:28 AM

Agree. Also, just to be clear - we don't need to alert the ICO (Information Commissioner's Office) right this second. We've got up to 72 hours, but that depends on how serious this really is

Bez

APP 10:29 AM

@Tinus do you think this is something we should loop in any cyber security agency for?

Tinus

APP 10:29 AM

If it looks like a complete lock-out, I'd say yes

10:29

We've got Cyvantics Security on retainer - just in case this gets out of hand.
@Pradeep C, ask Maya to reach out if needed

Bez

APP 10:31 AM

@Pradeep C I need a clear answer from the team. What exactly is affected right now?

Tinus

APP 10:31 AM

You're right. We need clear facts - which systems are locked, which are safe

Pradeep C

10:32 AM

I asked Maya to reachout to Cyvantics Security, we are working on it. I could see drop in orders

Bez

APP 10:33 AM

I need a clear answer from the team. What exactly is affected right now?

10:34

I need to know right now

Pradeep C

10:35 AM

@Bez we are following <https://uptime-labs.atlassian.net/wiki/external/MThjMTk4ZDU5ODU0NGZmMWE1NzhmNGY0MDQwNWI1NTA> these steps to resolve this ASAP. Maya is on it with her team

Bez

APP 10:35 AM

Which particular app is executed

Pradeep C

10:36 AM

Checkout is the App

Bez

APP 10:37 AM

Do we have any backup storage? Maybe we can try restoring from that

Pradeep C

10:40 AM

We have the SnapShots of DB and server Bez

10:43

@Bez With the sale starting today, the potential loss is significant - around \$180k

Bez

APP 10:44 AM

Losing this much worth of data isn't good. However we do have insurance, let me check

10:44

We're insured for up to \$1M for such losses. Once we're back up, we'll take it forward with the insurer

Tinus

APP 10:44 AM

In that case, we can proceed with the restoration from backup - it's our best option right now

Bez

APP 10:44 AM

Agreed. @Pradeep C let's move forward

10:44

Update me as soon as it'll be recovered. Board members are getting impatient

Pradeep C

10:45 AM

Restoration is in progress

10:46

Restoration is completed and servers are up

10:48

@Bez customers are asking for Refund,

UptimeLabs

APP 10:51 AM

archived #business-comms-5988. The contents will still be browsable and available in search.

Online Boutique

Shay

APP 10:07 AM

Not this time!, I just got a few alerts mentioning severe errors popping up in PROD

Bob

APP 10:07 AM

Weird... a few users just complained they are unable to complete their orders. Feels... off..

Pradeep C

10:08 AM

Hi @Bob which region is affected, could you please confirm ?

Bob

APP 10:08 AM

Sure, let me look at my reports

10:08

Here are some of the complaints we've received in the last few minutes. It's coming all across the globe

10:08

Germany - "I added items to my cart, clicked checkout, and it just kept spinning. Then it dumped me back to an empty cart"

10:08

USA - "Order failed twice, and now the cart is empty. I refreshed, but now the site is laggy"

10:08

Japan - "Got to checkout, then error 502. Tried again - cart gone"

10:08

To sum it all, we have got 240+ reports globally

10:08

(12 kB)

<https://i.ibb.co/7csQGjg/Lvl-26-reports-2.webp>

Pradeep C

10:10 AM

@Shay and @Daniel was there any deployments today in prod ?

Shay

APP 10:10 AM

Ok reviewing the change

Pradeep C

10:11 AM

While clicking on Place order the cart is getting empty @Daniel @Shay

Daniel

APP 10:11 AM

<https://uptime-labs.atlassian.net/wiki/external/YzYwYTAxNWQzOTI0NDYzOWI1MjkxNTI2YmVmMjUyZDE>

10:11

I don't think this is due to any changes because nothing matches the issue start time, and no PROD deployments have happened in a while around checkout service

Tanya

APP 10:11 AM

Same from the platform side. Strangely, both apps and infrastructure are struggling without any changes

Shay

APP 10:11 AM

You're right, that makes sense. On top of that, only checkout is having issues and it hasn't been touched in a while

Daniel

APP 10:12 AM

Im getting an empty cart as well

UptimeLabs

APP 10:12 AM

Incident record created

10:12

Send first comms in first 5 minutes

Daniel

APP 10:12 AM

Shall i check the logs?

UptimeLabs

APP 10:12 AM

Hint: Declare an incident.

Pradeep C

10:13 AM

Please check the logs

Shay

APP 10:13 AM

Looking into logs now

10:13

Found these below error logs

10:13

```
app[checkout-service] [ERROR] - write() failed, Read-only filesystem
app[checkout-service] Order submission failed for session_id=ae43f9 due to I/
O error
app[checkout-service] [ERROR] - Transaction commit failed, Read-only file
system
[ERROR] nginx[3245] - 502 Bad Gateway while accessing upstream checkout
service
[ERROR] nginx[3245] - 504 Gateway Timeout while accessing upstream
checkout service
```

10:13

The server is too slow and give up while responding back. I'm not sure why read-only errors are there

Daniel

APP 10:14 AM

Looking at the above logs, app looks fine. But system can't write new data. Errors suggests to be an infra component failure

10:14

Also checkout servers show CPU and memory limits exceeded alerts, this definitely looks bigger than just an app issue

10:14

```
app[checkout-service]: systemd[1][WARN] Resource usage threshold
exceeded - CPU: 96%, Memory: 92%
```

Shay

APP 10:14 AM

Could this be due to load or any changes ?

Pradeep C

10:14 AM

It could be due to resource issue, please restart the pods

Daniel

APP 10:15 AM

Sure i can restart the pods now

10:15

But this looks unusual to me

Pradeep C

10:15 AM

Check from infra side @Tanya does anything consuming high resources

Daniel

APP 10:15 AM

I dont think restarting the pods will fix it

Tanya

APP 10:15 AM

Checking infra...

10:15

All four checkout servers are maxed out - CPU, memory, and disk I/O all spiking. No changes or deployments were done from platform side

10:15

(92 kB)

<https://i.ibb.co/SwdqW9vX/checkout-servers-spike-simultaneous.webp>

10:16

It doesn't look like a load issue either. CPU and Memory spike is not matching with incoming traffic

10:16

I'm seeing a running process called init_locker.sh eating up most of the CPU on the checkout server. That's not something we usually run. Something's suspicious here

10:16

(12 kB)

<https://i.ibb.co/RtWsqrY/process-Running.webp>

10:16

This does look suspicious @Daniel

Pradeep C

10:18 AM

@Shay @Daniel please check is it due to high load ?

Daniel

APP 10:19 AM

I don't see the reason for having high load in the servers

10:19

We may need to bring in SecurityOps

Pradeep C

10:19 AM

@Tanya what does the init.locker.sh do?

10:20

Anyone here from SECOPS ??

Tanya

APP 10:20 AM

Im really not sure, for its definitely not our script

10:20

Maya is available

Pradeep C

10:21 AM

@Daniel do you have any idea on that script ?

Tanya

APP 10:21 AM

I recommend getting her in to take a look

Daniel

APP 10:21 AM

No idea

Pradeep C

10:21 AM

Hi @Maya we have incident here, could you please look at it

Maya

APP 10:21 AM

Let me check if there's anything suspicious

10:21

Weird!! Security agent known as EDR(Endpoint Detection and Response) is missing from all 4 checkout servers. That's? concerning

10:21

EDR is basically our endpoint defense tool, it tracks unusual activity at the servers

10:21

Also, I found an init_locker.sh script encrypting DB, app, and log files which is renaming the filename like below

10:21

order_log_2025-06-01.locked
session_state.tmp.locked

Daniel

APP 10:22 AM

this explains why there were errors in checkout logs saying write failed , read-only filesystem

Tanya

APP 10:22 AM

Wait... there's a file here named HELP_ME_DECRYPT.txt. I opened it, appears a ransom note. This doesn't look good

10:22

(27 kB)

<https://i.ibb.co/HDcr1Rzb/ransomnote.webp>

Maya

APP 10:22 AM

Confirmed. This is a ransomware breach. @Pradeep C inform business about this

Tanya

APP 10:22 AM

Shall i try killing this script ?

Bob

APP 10:22 AM

Guys!!! User complaints are sky rocketing, its turning catastrophic!

Pradeep C

10:23 AM

@Tanya yes please

Tanya

APP 10:23 AM

Ok , killing the script now...

10:24

Tried killing the script, all checkout servers just rebooted with a ransom banner.
New ransom note say: "Interruption detected. Price doubled. Pay \$10M in Bitcoin"

Pradeep C

10:24 AM

@Maya please involve your team here and ask them to work on it

Maya

APP 10:24 AM

Killing the script could make things worse, higher ransom or losing data forever
10:25

@Pradeep C before we do anything, I'd request everyone to please change their passwords

10:25

Also I'm removing everyone's access to servers - only I'll have control for now. Later we will reassess to do any activity further

Daniel

APP 10:25 AM

Done on my end

Hamed

APP 10:25 AM

Updated. @Maya smart move by limiting server's access

Shay

APP 10:25 AM

Password updated

Bob

APP 10:25 AM

Changed mine too. Better safe than sorry

Tanya

APP 10:25 AM

All set

10:25

It's much worse now. Every file I check is encrypted, nothing can be opened or recovered.

Maya

APP 10:25 AM

Oh wait i see that we did kill the script

Shay

APP 10:25 AM

I'm seeing new errors on frontend now. How's it for you @Pradeep C ?

Maya

APP 10:25 AM

Attention! when it comes to potential security breaches, it's important we don't discuss sensitive details here

10:25

I'm setting up private channel...

10:25

@Pradeep C before we move to private channel, can you check with business what's the plan - are we paying the ransom or moving with response?

Pradeep C

10:26 AM

We are not paying anything. Dont discuss this outside the business line.

10:27

@Maya Cant we write a script or anything to reverse this issue and get it resolved

Maya

APP 10:28 AM

No we will have to follow a specific protocol

10:28

We will need to move to a private channel

10:28

I can create one now

Pradeep C

10:28 AM

Ok please add me

Maya

APP 10:29 AM

Channel has been created

10:31

Ok will do

Bob

APP 10:36 AM

@Pradeep C user complaints are spiking. They're reporting the site is down, earlier it wasn't the case. What should I tell them now?

Pradeep C

10:37 AM

Bob we are rebooting the systems now, It will be Online soon

UptimeLabs

APP 10:42 AM

- You have less than 5 minutes. You can type /help if you need any reminders.

10:45

- You have less than 2 minutes. You can type /help if you need any reminders.

Bob

APP 10:47 AM

Getting a bunch of new complaints now. Users are neither able to see their return requests nor able to place new returns on the site

10:47

please inform bez

UptimeLabs

APP 10:47 AM

Thank you for playing, We recommend that you take 5 minutes to go and get a drink or stretch your legs.

Once you are back we ask that you complete this retrospective and feedback form, just hit I am ready when you want to start.

10:29

I'd say one senior person each from security, platform, and engineering. Also add Tanya, tasks could be platform intensive

Pradeep C

10:30 AM

Pull bez and Tinus here

Maya

APP 10:30 AM

They can stay on the business coms

10:30

That channel is secure for them two

Pradeep C

10:30 AM

@Maya Reachout to Cyvantics Security, if they can help us

Maya

APP 10:31 AM

Yes, we've got an IR(incident response) retainer with Cyvantics Security

10:31

Sure

10:31

Looped in Cyvantics Security - they're on their way now to take snapshots of the infected server and storage, followed by forensics on it

10:31

Meanwhile, I've got this from Cyvantics. @Pradeep C, can you help track the steps and coordinate?

10:31

<https://uptime-labs.atlassian.net/wiki/external/MThjMTk4ZDU5ODU0NGZmMWE1NzhmNGY0MDQwNWl1NTA>

10:31

We've got isolation steps in the playbook, but before we dive in, can you paste that list here? I'll help team run through it

10:32

I recommend getting Tanya, and Daniel in here

Pradeep C

10:33 AM

Steps for Isolation:

Steps to be done, mentioned along with the **owning** team

1. Disconnect the infected server -> Platforms
2. Cut off infrastructure traffic -> Platforms
3. Disconnect DB & freeze backup -> Application
4. Detach from Shared Resource -> Platforms
5. Take snapshots (Disk & Memory) -> Ask team
6. Kill suspicious process or activity -> Platforms

Steps for Restoration:

Steps to be done, mentioned along with the **owning** team

1. Validate backups → Security
2. Wipe infected systems → Platforms
3. Rebuild from clean backup → Platforms
4. Re-enable security agent on the servers → Security
5. Reconnect traffic to services and monitor → Platforms

10:33

@Maya pull them

Maya

APP 10:35 AM

Bez messaged me, he wants an update

1

Pradeep C

10:35 AM

@Maya are we running through these steps ?

Maya

APP 10:36 AM

Just checkout is the application which is impacted

Pradeep C

10:36 AM

Okay

Maya

APP 10:36 AM

I've given write access to Tanya, Hamed, Daniel, and myself

Tanya

APP 10:36 AM

Disconnecting the checkout servers from the infra now

Daniel

APP 10:36 AM

I'm on it. Disconnecting DB access for checkout and checking if scheduled backups exist

Hamed

APP 10:37 AM

I'll verify if any shared storage is still attached to the checkout DB

Daniel

APP 10:37 AM

Step 3 done, DB connection to checkout is now cut

Tanya

APP 10:37 AM

Step 1 done, Checkout servers are now fully disconnected. Moving to isolate the infra from all external traffic

Hamed

APP 10:37 AM

Step 4 confirmed, No shared storage attached to checkout, which makes sense since checkout has its standalone storage

Tanya

APP 10:37 AM

Step 2 completed, Infra is now fully cut off from the outside world. That means the website will remain completely down until we recover

Maya

APP 10:37 AM

Step 5 done, Cyvantics has completed taking snapshots of the checkout servers and database. They've now moved on to forensics. @Hamed, we're good to kill the script now

Hamed

APP 10:37 AM

Step 6 done, The Script has been killed. @Pradeep C let us know and double-

check if anything else is pending on our side

Pradeep C

10:39 AM

It is clear, Please re-enable the servers

Maya

APP 10:40 AM

Yes, we must have a backup. Platform team can confirm us

Hamed

APP 10:40 AM

Correct, we do have backup which only runs at 2AM. Latest is yesterday's.
We'll lose today's orders

Maya

APP 10:40 AM

Isolation is complete. We're good to move toward restoration using the backup storage now

10:40

@Pradeep C could you please confirm with business before moving forward on this

10:41

I've called in @Bob to the channel

Bob

APP 10:41 AM

@Pradeep C, I hear you need my help, what exactly should I look into?

10:41

With the sale starting today, the potential loss is significant - around \$180k

Pradeep C

10:41 AM

Still Im seeing 502 bad gateway @Maya

10:42

@Daniel @Tanya please have a look into it

Maya

APP 10:42 AM

We haven't restored the platform yet

Daniel

APP 10:42 AM

was added to private-comms-5988 by
Pradeep C

. Also,
Tanya
joined via invite.

Maya

APP 10:43 AM

about the 180k loss

10:43

Have you confirmed with the business?

10:43

Can you confirm from business

Pradeep C

10:43 AM

I informed Bez

Maya

APP 10:44 AM

Thanks for the go-ahead. @Pradeep C, please track all restoration steps

10:44

I'm now validating the backup storage to ensure it's safe

Hamed

APP 10:44 AM

I'm provisioning new checkout servers, will update once ready

Maya

APP 10:44 AM

Backup is clean and safe. @Hamed, you can start rebuilding checkout from backup storage

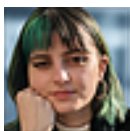

Hamed

APP 10:44 AM

Thanks, Maya. New servers are ready. I'll start rebuilding now using backup storage

10:44

Rebuild completed

Maya

APP 10:44 AM

I've enabled the security agents (EDR) on checkout servers

Daniel

APP 10:44 AM

I'll monitor application health once services are restored

Maya

APP 10:44 AM

@Pradeep C , can you confirm all tasks are wrapped up and we are good to bring the traffic back? Just want to be sure, as this is the final restoration step before we move

Pradeep C

10:45 AM

Please restore the servers we have insurance for 1M

Tanya

APP 10:45 AM

Thanks for the go ahead. Bringing up network traffic in progress...

10:45

Restoration completed

Bob

APP 10:46 AM

Wait!! getting a bunch of new complaints now. Users are neither able to see their return requests nor able to place new returns on the site

Maya

APP 10:46 AM

Yeah, that's probably the missing today's checkout data. Anyone who ordered or returned something during that time won't see it - makes sense since we restored from the yesterday's backup

Tanya

APP 10:46 AM

Tough, but expected :)

Pradeep C

10:46 AM

Thanks everyone

Bob

APP 10:46 AM

What should I tell them? They are asking for refunds

Pradeep C

10:47 AM

@Bob Servers are working as expected now, Issues have been resolved

APP 10:45 AM

Thanks for the go ahead. Bringing up network traffic in progress...

10:45

Restoration completed

Bob

APP 10:46 AM

Wait!! getting a bunch of new complaints now. Users are neither able to see their return requests nor able to place new returns on the site

Maya

APP 10:46 AM

Yeah, that's probably the missing today's checkout data. Anyone who ordered or returned something during that time won't see it - makes sense since we restored from the yesterday's backup

Tanya

APP 10:46 AM

Tough, but expected :)

Pradeep C

10:46 AM

Thanks everyone

Bob

APP 10:46 AM

What should I tell them? They are asking for refunds

Pradeep C

10:47 AM

@Bob Servers are working as expected now, Issues have been resolved
